---

Members of OEHHA,

I was at the hearing in Sacramento regarding Glyphosate NSRL on July 7, 2017. The testimony of the scientists at the hearing was even more alarming than I had expected. I have also been researching why Argentina, The Netherlands, Sri Lanka, and Malta have all banned glyphosate and I am even more convinced that there is no safe level of this toxic chemical. It should be completely banned in this country as we have already saturated our soil and water with it and will be paying the consequences for years to come.

Please protect the citizens of this State and possibly the rest of the country by finding a NO SAFE level for glyphosate.

Thank you for your time.

Sincerely,

Heather Kovac  
South Lake Tahoe, CA
